Prof. Brian Scott Peskin**

## REMARKABLE Case Study Dementia Reversal Testimonial

The fear of Dementia / Alzheimer's is one of the most terrifying diseases. You work hard your entire life and can end up incapable of thought or speech.

The unique Medical Food EZtrek® offers new hope. Addressing the root cause of dementia, impaired delta-6 desaturase pathway is extremely promising. This impairment is known to occur in Dementia/ Alzheimer's (See Prof. Peskin's Dementia / Alzheimer's Special Medical Report). Helping to nutritionally compensate with The Medical Food EZtrek® can lead to unprecedented and amazing results. Based on this incredible testimonial, the reversal of symptoms in vascular dementia NOW appears possible.

The brain has over 40 million capillaries. In addition, each neuron has its own capillary, making the total over 100 million. These capillaries are where both the vital nutrient transfer and critical oxygen transfer take place. Additionally, with EZtrek®, anti-inflammation is boosted by helping to nutritionally compensate for an impaired delta-6 desaturase (D6D) pathway known to occur in Dementia / Alzheimer's patients. These capillaries are so small that MRI and CT scans can't and, therefore, won't see their impairment. We believe that understanding this area of medical physiology is key, and no one is more concentrated in this unique area than Peskin Pharmaceuticals®.

We are delighted to offer the promise of New Hope. We thank Antoinette for allowing us to share her mom's results. Please see Prof. Peskin's Dementia / Alzheimer's Special Medical Report.

"Hello Prof. Peskin,

My mother's name is Madelyn Mosley, and she is **85 years old**. She does not have any other diagnosable diseases other than **Dementia/Alzheimer's**. Her cholesterol, blood pressure, h1c, kidneys and **everything else is all good** and normal. She is **completely immobile, and bed and wheelchair bound**. **She barely talks, one of two words in a day, and has been very despondent in her responses. She slept most of the day**, even when company visited, and she hung out in the television room with her children. She has been on a **rapid decline since August of this year**, and this

**Note: Can Dementia be reversed?**

**No, Dementia or Alzheimer's cannot be reversed.**

**We prove this wrong.**

is why I called in Hospice. **Hospice accepted her feeling as though she had 6 months or less to live**, with the caveat being that should they feel she was stable they would remove her from the program. Well, on **December 23rd they called and said they will remove her from the program**.

Her doctor referred her to hospice on several occasions, but I didn't sense she needed it, as she was too aware, and more so mobility challenged. I really second guessed the doctors on their diagnosis due in part to her being so cognitive in the last 3 years as her mobility declined. Only recently, as a result of my sister, Robin, age 64, being diagnosed with more than average white brain matter on a physical, it was discovered that Robin has a defect in her notch 3 gene. The doctors said she may be a candidate for a rare vascular disease called "Cadasil." [CADASIL stands for "Cerebral Autosomal Dominant **Arteriopathy with Subcortical Infarcts** and Leukoencephalopathy. **It is a rare, inherited genetic disorder that affects the blood vessels in the brain, leading to small strokes (infarcts) and white matter damage (leukoencephalopathy)**]. I had my **mother tested and she has the same abnormality**. I asked the doctors could this be the culprit and they said, maybe so but **it doesn't matter because it all leads to the same thing, vascular Dementia/Alzheimer's**. I have not been tested, but I am in remission from Myasthenia Gravis.

My mother had **cognitive tests starting in 2018 when she was first diagnosed due to strange behavior. She performed very well on her cognitive tests** until she broke her foot in **2021** following my older sister's death, Charlotte, age 65, of lung and brain cancer. She started on a **rapid decline since then**.

Hospice started their services **Monday October 21st**, and she was very much so despondent and fit the profile to get accepted. I started my mother on **EZtrek® on December 3rd, and within a week we all started noticing her face became more normally formed instead being stuck in a frowning stage, she followed conversations more with laughing responses or gestures**. The second week the Hospice nurse came in and she yelled to her, "Heeeeyyyyyyy", just like that. **We all were shocked!** I leaned into my mother and laughingly said in her ear, "Mom, you are going to get us kicked out of this program!" :-). Her husband, my Step-father, Ernest Mosley, said she is definitely more aware and saying more 1-word answers, trying to hold his hand more and saying all of our names. **It is very remarkable and encouraging!** The only thing I have done is given her EZtrek®. If I can be of more service to you, please let me know. She has a very long way to go if she improves more at all, but I have a close eye on her and we are very encouraged, if only for a moment in time. I will continue to give to her and track her progress.

Thank you, Professor Peskin!!!"  
Antoinette Bobbit

**WARNING:**  
**Silence is NOT Golden**  
**Chronic Inflammation**  
**THE Silent Slow KILLER**

by  
**Prof. Brian Scott Peskin**

## **WARNING: Silence is NOT Golden Chronic Inflammation - The Silent Slow KILLER**

You don't feel it and can't see it, but inflammation is killing you. **Chronic INFLAMMATION is now known as the #1 cause of disease** – from Heart Attacks – to Alzheimer's and even Cancer. **Death results from a 1st heart attack without symptoms about 1/3rd of the time with no prior warning.** Imagine, husbands and wives and children are left without you because you didn't take preventative action. Now, with the new Medical Food EZtrek® there is significant help against chronic inflammation. Now, there is hope before it is too late. Finally, you can take real, science-based preventative action against our greatest fears: Dementia / Alzheimer's, Heart Disease, Cancer, and Diabetes.

**These diseases often go undetected until they strike – often without warning – with devastating consequences.** There are at least 9 major diseases detailed in the medical journals with inflammation / known impairment of the anti-inflammatory pathway, technically termed delta-6 desaturase (D6D). There hasn't been a solution until now. Impairment gives you **chronic inflammation you never feel or are aware of until it is too late.** They share at least one common trait: Chronic Systemic Inflammation worsened by processed oils in the diet from foods & beverages – like liquid “nutritional supplements” – at your local supermarket and favorite restaurants.

The new Medical Food EZtrek® was specifically designed to help protect you against this daily assault of chronic inflammation caused by processed foods everyone knows are likely harmful, especially the processed cooking oils we all consume and can't avoid but should avoid. It doesn't take much of them to slowly kill you or make you sick.

Years of research into the cause and combatting this never-ending inflammation has led to the creation of the remarkably effective Medical Food, EZtrek®. World-leading authority Prof. Brian Scott Peskin has written extensively on this subject, and you can review his body of work at [www.BrianPeskin.com](http://www.BrianPeskin.com).

Physicians can now Fight these **Silent Slow Killers** with a daily dose of EZTrek® added to patient treatment protocols. Implementing this strategy immediately significantly increases the effectiveness of existing protocols with virtually no adverse side effects. Without necessarily understanding the importance of D6D and helping to nutritionally compensate for its impairment with EZtrek®, no protocol ever reaches 100% effectiveness.

## Key FACT About Anti-inflammatory $\Delta$ -6 Desaturase (D6D)

Can EZtrek<sup>®</sup> cure the inflammatory component of Dementia, Heart Disease, Cancer, ...?

---

***NO.*** *Once you are diagnosed with an inflammatory-based disease, your most powerful anti-inflammatory metabolic **pathway** —  $\Delta$ -6 Desaturase (D6D) — is **permanently damaged**, to a greater or lesser degree. ***Production of the body's most anti-inflammatory — PGE<sub>1</sub> — will never be maximized.****

---

Minimizing consumption of processed / adulterated plant seed-based oils will certainly help but will be insufficient for most patients. EZtrek<sup>®</sup> is designed to help nutritionally compensate for unimpaired D6D pathways ON A DAILY BASIS.

**Physicians and their patients are NOW achieving unprecedented results with EZtrek<sup>®</sup>.**
