Arterial Health Test

It is the test that shows the aging of blood vessel and peripheral blood circulation status by analyzing the minute signal detected at the finger tip.

Analysis of Pulse

Vascular Health Analysis

ITEM	MEASURED VALUE	SUB-OPTIMAL	NORMAL	OPTIMAL
AE	2			
PE	26			

※ AE : Arterial Vessel Elasticity
PE : Peripheral Vessel Elasticity

Horrible!
Arteries
are STIFF
like a
straw.

Level Analysis

Level	1	2	3	4	5	6	7
(%)					31.8%	15.9%	4.5%
Vessel States	9.1%	6.8%	18.2%	13.6%			
	Excellent	Good	Careful	Warning	Bad	Very Bad	

Comment

66-year-old physician patient: Horrible arterial flexibility & significant arterial occlusion -- A HEART ATTACK is imminent.

Aged progress is highly faster and blood circulation is very bad. Your cardiac state is at weakness and you may have the blood circulation disorder by diabetes, edema and hyperlipidemia. Or you seem like being at older age or have arteriosclerosis or circulatory organ disease.

Comment

Excellent; especially given chronicle age

Cigar smoker, no exercise, social drinker, employed, caretaker for wife.

Vessel flexibility and blood circulation are very good.

Given chronological age, this is an outstanding result.

Pt using organic plant-based seed oils — EZtrek®

**** Skin elasticity is excellent, too. ****
